The IFRS 17 Market

How do you think IFRS 17 will change the insurance industry?

IFRS 17

What Drives Complexity in Implementation?

There are **several factors** which may **strongly impact the complexity** and amount of work within the project

| Data | Architecture, basic volumes | Reporting | Methodology | Process |
|--|--|--|---|---|
| <ul style="list-style-type: none"> • Quality of input data • Number and complexity of validation rules • Number of different data sets required by actuarial tools and complexity of their content • Number of data sets generated by actuarial tools, validation rules to be run on them, amount of further processing • Number and complexity of data to be generated for accounting system | <ul style="list-style-type: none"> • Centralized vs. decentralized • Number and complexity of entities • Number and complexity of source systems • Number of data packages to be handled | <ul style="list-style-type: none"> • Number and complexity of reports changed within IFRS 17 (solo, for all entities and for the group) • List of external reports (if any) defined as required (solo, for all entities and for the group) • Number and complexity of reports as part of the „internal reporting“ | <ul style="list-style-type: none"> • Number of different approaches used (BBA/GMM, PAA, VFA) • Level of detail of calculations (lob, cohort, contract, unit of exposure) • Complexity of approach to discounting and calculation of Risk Adjustments, CSM • Complexity of approach for transition period • Number and complexity of posting rules • Number and complexity of reconciliation rules | <ul style="list-style-type: none"> • Number and complexity of processes to be handled • Performance requirements • Level of traceability and auditability required |

Business Requirements for IFRS 17 Solution

Finance and Actuarial Considerations

Usability

Ease of use for finance users to process IFRS17 closing, reconciliations and exception handling

Reliability & Transparency

Validations to keep accuracy of the numbers calculated, open architecture to allow checking & drilldown of intermediate results

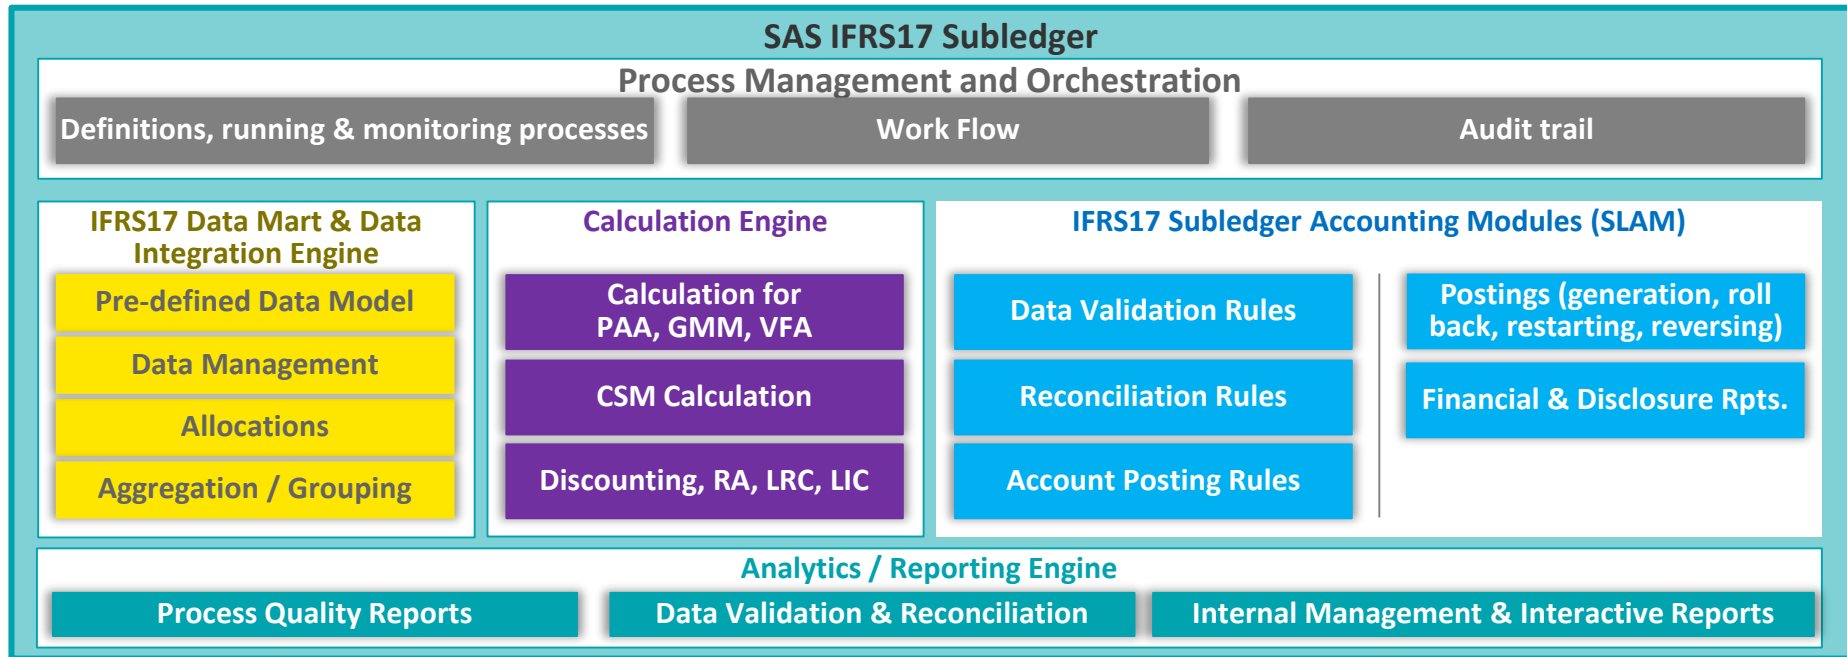

Robust Finance Controls

Controls to provide profile-driven user access, audit logs and exception handling

The background of the slide is a blue-tinted photograph of an industrial facility, possibly a refinery or chemical plant, featuring complex piping, scaffolding, and storage tanks. A large circular logo is visible in the upper left quadrant of the background image.

SAS IFRS17 Sub-Ledger is Differentiated by Its Ability to Support All Methods of Measurement – GMM, VFA & PAA

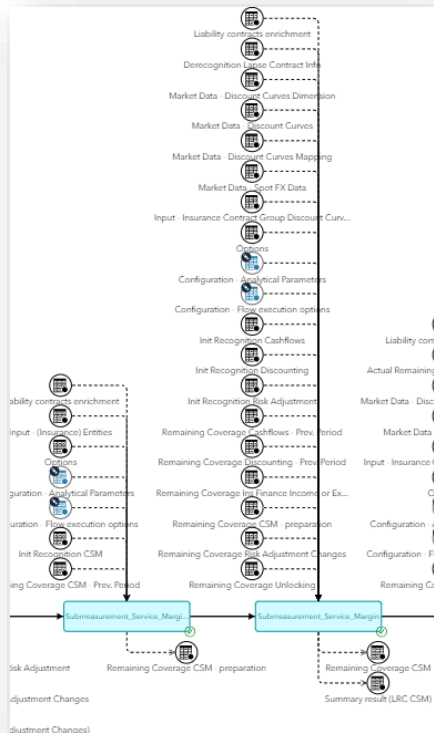

- ◆ **Grouping the contracts** according to portfolios, groups and cohorts.
- ◆ **Identification of onerous contracts** based on predefined business rules that will determine if a contract is onerous, profitable, or profitable with significant risk to become onerous at first time recognition.
- ◆ **Discounting using locked-in and current rates**– we support both approaches to the definition of discount rate (top-down and bottom-up); cash flows for portfolio (or actually segment/cohort) should be discounted using locked-in rate (from recognition date) and current date; claims provisions discounted using rate from recognition of claim
- ◆ **Initial recognition**- calculation for new policies; following the General Measurement Model, Variable Fee Approach and Premium Allocation Approach; including:
- ◆ **Risk Adjustment** – difference between an uncertain liability and a liability whose amount is certain.
- ◆ **Contractual Service Margin**– Contract profit (released over coverage period in line with the transfer of services provided (reduction in exposure)

- ◆ **Subsequent measurements** - for existing business; including calculation of release of CSM within given reporting period on contract level; including elements of unlocking, release, unwinding.
- ◆ **Other measures** – like unearned premium reserve for PAA, or measures disclosed in reporting: interest on liability at inception rate, change in Best Estimates resulting from change in discount rates.

Calculation Engine

Calculations; CSM and Loss Component

System starts with OB value of CSM and makes allowance for initial recognition, then if it is positive:

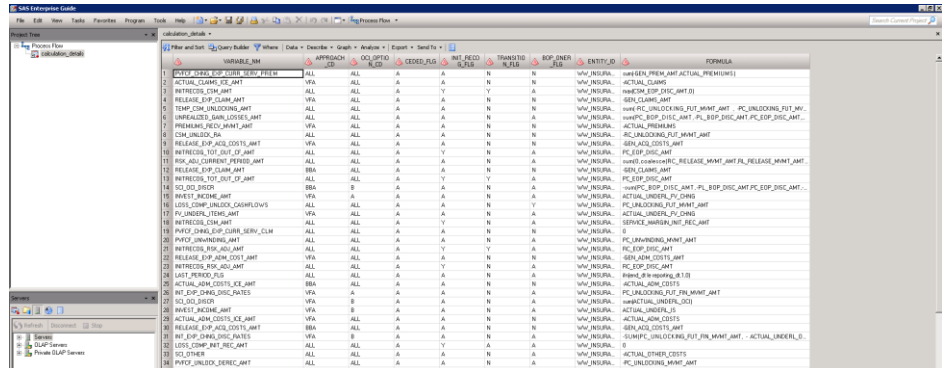

- makes allowance for unwinding effects for remaining coverage
- Then such value of CSM is basis for calculation of derecognition in CSM (based on lapse ratio calculated in previous nodes for derecognition)
- Impact of fx rate change is applied
- Premium experience adjustment
- Applies the effect of unlocking for PV and RA
- Recalculates the CSM release in given period and run-off
- Verifies closing value of CSM (whether is not positive, which would mean that liability contracts become onerous and loss component is created)

| | Value Amount | Value Amount |
|---|---------------|---------------|
| ↓ Liability for remaining insurance coverage | €15,237.97 | (€159,933.94) |
| + ↓ 1. PV of future insurance contract related Cash Flows | €915,941.44 | (€121,847.32) |
| + ↓ 2. Risk Adjustment | (€53,873.93) | (€38,086.63) |
| - ↓ 3. Service Margin | (€846,829.54) | (€0.00) |
| 01. Opening Balance | €0.00 | (€846,829.54) |
| 02. Currency Exchange Differences | €0.00 | €0.00 |
| 03. Recognition | (€859,814.11) | €0.00 |
| 04. Derecognition | €0.00 | €174,446.89 |
| 05. Unwinding | (€2,120.53) | (€25,404.89) |
| 06. Experience Adjustment Premiums | €0.00 | €0.00 |
| 07. Unlocking | €0.00 | €697,787.54 |
| 08. Changes in the Variable Fee | €0.00 | €0.00 |
| 09. Risk Adjustment Change due to Eco. Variables | €0.00 | €0.00 |
| 10. CSM Not floored (remaining part) | €0.00 | €0.00 |
| 11. Release | €15,105.10 | €0.00 |
